

a video printer housing portion with a video camera attached thereto;  
a signal input and output connection terminal disposed on said video printer  
housing portion for electrically connecting said video camera attached to said video printer  
housing portion to said video printer; and  
an operation system disposed on said video printer housing portion for operating  
said video camera.

Sub C1 } 4. (once amended) A video printer according to claim 1, wherein said video  
camera operation system includes a shuttle ring for displaying a video picture recorded as  
continuous motion images in the play mode, pause mode, fast-forward mode or rewind  
mode on the picture screen of said liquid-crystal display monitor.

BZ 5. (once amended) A video printer according to claim 1, wherein said video  
camera operation system includes memory operation means for storing video data  
indicative of a video picture [recorded] selected from a plurality of video pictures  
recorded as continuous motion images by said video camera in a memory of said video  
printer.

B3 7. A video printer according to claim 1, wherein said printer supports a video camera  
operation switch and a printer operation switch.

Kindly amend the specification as follows:

**IN THE SPECIFICATION:**

Page 2, line 2, delete "picture, more of" and insert -- picture mode or-- therefor.
